OBJECTIVE

I'm a Biotechnology undergraduate at Menoufia University with a strong interest in Bioinformatics, Molecular Biology, and Genetic Engineering.

Over the past few years, I've developed skills in Python programming, data analysis, and molecular biology techniques, and I'm currently expanding my knowledge in bioinformatics tools and databases (NCBI, EMBL, KEGG).

I'm passionate about applying computational and biological sciences together to solve real-world challenges, especially in genetics, data-driven biology, and environmental biotechnology.

I'm actively seeking chances (internships, research collaboration, and entry-level jobs) in Bioinformatics, Data Analysis, and Biotechnology research where I can apply and develop my skills.
